

UNITED

L A B O R A T O R I E S

GENERAL INFORMATION:

United 313 is a blend of organic penetrants and dispersal agents for use in cooling water systems. Regular use of **United 313** as part of a complete treatment program will keep your cooling system operating cleanly and efficiently.

United 313 is Earth Smart® certified; formulated to be safer in use for both the user and the environment. When used as part of a complete United Laboratories' Cycle Smart™ cooling tower treatment program, it minimizes environmental impact.

United 313 functions by penetrating the matrix of organic deposits, which results in the sloughing off and dispersal of the organic matter. Consistent use of **United 313** will keep system surfaces free of deposits and corrosion.

United 313 is especially effective in cleaning deposits that result from the production and algal bacterial biofilms that create localized corrosion cells that are not readily accessible to corrosion inhibitors.

DIRECTIONS FOR USE:

United 313 should always be used as a part of a complete Cycle Smart™ cooling tower treatment program. Dosage and application frequency will depend on the severity of existing biomasses. Consult your United Laboratories representative for appropriate dosage and program procedures that best fit your system needs.

United 313 can be fed by hand to the cooling tower basin or pumped into the system with a suitable pump. Again, consult your United Laboratories representative for the best recommendation for your system.
