

UNITED

LABORATORIES

United 842 Devour Power for Drain Maintenance is a blend of specific microbes selected for their ability to bio-degrade high volumes of grease including long-chain fatty acids which other products cannot break down. More importantly, **Devour Power for Drain Maintenance** provides grease control in drain lines, pipes and floor traps without using surfactants. The bio-degradation of the grease devours it and prevents it from simply being mobilized further down the drain.

The unique formulation of **United 842 Devour Power for Drain Maintenance**:

- Contains patented gram-positive bacterial strains to bio-degrade long-chain fatty acids.
- Includes promicrobials which are capable of fast degradation of Fats, Oils, and Grease (FOG).
- Has a pH range from 4.5 to 9.8.
- Works with an effective temperature range of 38°– 145°F and an optimal temperature range of 60°– 90°F.
- Maintains optimal FOG degradation through three-fold action.
- Has passed the EPA Methods 1664 and 1664A, proving the grease is not mobilized.
- Reduces odors.

DIRECTIONS FOR USE IN DRAIN LINES:

Treat drains for 3 to 7 days at start up.

Dose weekly with 2–4 oz. per drain trap, allowing to sit over night when possible for best results.

For long drain lines, dose with 4–8 oz. daily, adjusting the treatment level based on need.

Contact your United sales representative for additional dosage recommendations.
