

UNITED

LABORATORIES

- NON-CHLORINATED
- NO-HEXANE
- COLORLESS, ODORLESS AND STAINLESS, YET MORE SLIPPERY THAN SILICONE OILS.

DIRECTIONS:

Shake can vigorously, rattling agitator ball for at least 1 minute. Surface must be clean and dry. Hold container 5 to 10 inches (13 to 25 cm) from surface and spray a thin film on area.

Made with an extremely fine fluorotelomer powder with outstanding microscopic film forming properties. It is the perfect release agent because it provides very efficient lubrication without the dangers and inconveniences of oily silicones or messy graphite. It retains its lubricating power at extreme temperatures from minus 100°F (-73°C) to over 500°F (260°C), and resists flushing with water or solvents.

FOR FOOD USE: Avoid food contamination during use and storage. Do not use on food contact surfaces.

FOR SPECIALIZED USE:

It is designed for special commercial and industrial applications; works well on drawers, hinges, springs, pulleys, chain drives, plastics, rubber, metals, leather, wood, glass, paper and other smooth surfaces. Its applications are very numerous where machinery is used, or wherever a release agent is required. May be used as a high-efficiency mold release. It is more slippery than silicones or graphite, yet far more convenient to use in any application. Do not directly add to food in the application of the product.

DANGER: Contains Isoparaffinic Hydrocarbon (CAS # 64741-66-8), Heptanes (CAS # 426260-76-6), Isopropyl Alcohol (CAS # 67-63-0), Polytetrafluoroethylene (CAS # 9002-84-0), Liquefied Petroleum Gas (CAS # 68476-86-8).

FOR FOOD PLANT AND OTHER INDUSTRIAL USE.

Manufactured and Printed in U.S.A.
