L A B O R A T O R I E S

Conventional floor dressings and diluted polish are simply inadequate for use with today's high-speed floor burnishers. The high heat created by the 1000 - 2000 RPM Machines requires special formulations to protect the floor surface and the finish.

United 295 BURNISH AIDE is formulated especially to address the problems associated with high-speed burnishing:

- Dissipates heat without crusting or annealing the floor.
- Contains cleaners to remove black heel marks and abrasive soil.
- Restores floor finish solids lost to wear and burnishing friction.
- Resists "dusting" often caused by high-speed machines.

DIRECTIONS:

If your floor machine has an automatic application device, use **United 295 BURNISH AIDE** full strength.

United 295 BURNISH AIDE can be applied using a trigger sprayer or other conventional sprayer. Spray area to be restored (no more than 100 square feet [10 m²] at a time) and then buff while the floor is still damp. **BURNISH AIDE** repairs scuffs and scratches, restores floor finish removed by wear and buffing, and enhances floor appearance.

Regular use of **United 295 BURNISH AIDE** will result in a floor with a higher gloss than the initial floor finishing gave.
